1. A method of handling reminders in a handportable communication terminal, comprising

- manually entering of character into a text editor window for providing a reminder text,

5
- entering time information into a time entry window for setting a reminder time,

- providing real time clock information from a clock application,

- comparing said time information with the real time clock information, and

- alerting when the real time clock has reached said reminder time.

10

2. A method according to claim 1, wherein the alerting comprises display of the reminder text.

3. A handportable communication terminal, including

15
- a control unit,

- a user interface including a display, text input means, and said user interface is controlled by the control unit,

- a clock application controlled by the control unit, and having a clock function and a reminder application which the display can present,

20
- said reminder application has:

  - a text editor window in which the user through the user interface enters a reminder text label, and

  - a time entry window in which the user through the user interface enters a date and time for the reminder,

25
- and an alert unit that alerts when the clock reaches the entered date and time for the reminder.

4. A handportable communication terminal according to claim 3, and comprising a clock application providing real time clock information to the reminder

30
application, and said reminder application displays a reminder note when the real time clock has reached the reminder time.

5. A handportable communication terminal according to claim 3, wherein the reminder application provides the user access to "Add new" reminders, "View all" existing reminders and "Erase" existing reminders.

5   6. A handportable communication terminal according to claim 3, wherein the reminder application allows the user to transmit a reminder to a remote second communication terminal via a wireless communication network.

7. A handportable communication terminal according to claim 6, wherein the
10 reminder application upon receiving instructions to send a reminder requests the user to enter a phone number on the receiver of the reminder.

8. A handportable communication terminal according to claim 7, wherein the reminder application allows the user to search for the phone number of the
15 receiving terminal in an internal phone number database of the transmitting terminal.

9. A handportable communication terminal according to claim 6, wherein the reminder application allows the user to inspect a reminder received from a
20 remote second communication terminal via a wireless communication network.

10. A handportable communication terminal according to claim 9, wherein the reminder application furthermore allows the user to save or discard a reminder received from a remote second communication terminal.

25

SubA2

11. A handportable communication terminal according to any of the claims 6-10, wherein the reminders are transferred via the wireless communication network included in a message according to the Smart Messaging Specification.
